Mean 24.747; Variance 35.072; scale 0.706 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 26.040; Variance 34.545; scale 0.754 Statistics: pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Feb 4 17:28:08 2000; MasPar time 5.07 Seconds 129.163 Million cell updates/sec

Title: >US-09-150-813-43
Description: (1-12) from US09150813.pep
Parfect Score: 91
Sequence: 1 QVCADPSESWWQ 12

Tabular output not generated.

Scoring table: PAM 150 Gap 15 Searched: 179066 seqs, 54579741 residues

Post-processing: Minimum Match 0% Listing first 45 summaries Database: sptremb19 1:sp_archea 2:sp_bacteria 3:sp_fungi 4:sp_human 1:sp_archea 2:sp_bacteria 5:sp_nhve 8:sp_organelle 5:sp_invertebrate 6:sp_mammal 7:sp_mh 8:sp_organelle 9:sp_phage 10:sp_ant 11:sp_rodent 12:sp_unclassified 13:sp_vertebrate 14:sp_virus

Statistics: Mean 25.020; Variance 34.042; scale 0.735

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wempe, F.; Henschen, A.; Scheit, K.H.

DNA Cell Biol. (1991) 10:671-679 identified a major basic
Gene expression and cDNA cloning identified a major basic
protein constituent of bovine seminal plasma as bovine
monocyte-chemoattractant protein-1 (MCP-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       #binding_site carbohydrate (Asn) (covalent) #status
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

This protein belongs to the beta-chemokine family which is one of the major HV-suppressive factors. It plays roles in autoimmune processes such as multiple sclerosis and rheumatoid arthritis and in tunor biology, and contribute to the trafficking and recuitment of the responsive cells.
                                                                                                                                      Bartels, J.; Schlueter, C.; Richter, E.; Noso, N.; Kulke, R.; Christophers, E.; Schroeder, J.M.
